

- **Geospatial Detection Zones**— not merely tripwires—based on size, speed, bearing, and geo-location of targets
- **Automatic Stabilization** that reduces nuisance alarms due to camera shake from wind and vibrations
- **Open architecture** for interoperability with the customer’s ACS and VMS
- **A toolbox of filters** to manage outdoor conditions at each site

Trusted Solutions

There are few factors more important than trust when it comes to securing critical systems and infrastructure. SightLogix provides trusted technology systems which have proven themselves at utilities time and again, and we’re proud that others in the businesses of protecting the world’s most vital assets agree that our comprehensive, uniquely designed thermal camera system is a solution you can count on.
